

The 22 is a complete suite of electrical wall accessories which challenge the traditional tired and ubiquitous cover plate concept. Power receptacles, lighting control dimmer switches, on/off switches, telephone and data connections, cable and speaker outlets, etc. may now be mounted flush into drywall or millwork with a new CSA and UL approved, utility patent pending system which eliminates the need for a cover plate. Switches and power receptacles can now, finally be flush with the surface of the wall and significantly more visually subtle than ever before.

APPLICATIONS

The 22.2.4 is designed to be used on surfaces other than drywall - for example: millwork, glass, stone, etc. The 22.2.4 will accommodate a wide range of finish material thicknesses and accept any of the 22.3 operative components.

MATERIALS

Polycarbonate cover plate, stainless steel screws

US patent # 7,956,295 and 8,232,482
